Deliverables

$\rightarrow$ $\bullet$ $\rightarrow$ Control proofs.

Backbone
Schematization: $\bullet$ parameters
 $\bullet$ architecture

Material: $\bullet$ Data cleaning
 $\bullet$ sensor parameters } for me
 $\bullet$ process parameters.

services { $\bullet$ show temperature (CPU) } categorize
 $\bullet$ RAM } for an specific sensor. using confidences.
 $\bullet$ use }
 $\bullet$ POT }
 $\bullet$ i metadata? }
SW { }
+ L...
temp. outside
technology.

$\rightarrow$ Use dictionary for specific declaration of variables, classes and functions.
for each NB, starting by data import

for any class, function:

def...
// parameters
returning
//

Define specific environment (local)

V₄:

PSD inference for categorize issues

- ↳ Assume a global range {automatize the value acquired}
 - ↳ convert into a expected format
- * Parameters defined by automation

Parameters for quality

↳ Correlación acumulada → Respeto al rigor.

↳ Estimación neta (Mutual information)

↳ Productos ponderados

↳

Measurement

Estimación de nodos

por sensu

por sesión

por especificidad

V_{4-a}:
